US Pelvis: Result Notes

Study Result

Narrative & Impression

Exam Name
US-Pelvis.

Clinical Indication
UTERINE POLYP.

Technique
Real-time grey-scale images of the pelvis.

Comparison
None.

Findings
Endovaginal examination was performed since the bladder was under-distended.

There is intrauterine polypoid lesion showing mixed solid and cystic echotexture at the level of the fundus, measuring 6.7 x 1 x 0.8 cm (image 10).
The endometrial thickness measures 1 cm, correlate to menstrual cycle.

Note is made of follicular ovaries showing normal size and echotexture.
The right ovary shows an estimated volume of 9 cc.
The left ovary shows an estimated volume of 10 cc.
No adnexal masses or pelvic collections are seen.

Impression
Intrauterine endometrial polypoid lesion at the level of the fundus as described above.

Other findings
Is there a critical or an unexpected finding?
No
